

## Side-Power Radio Remote Control

New and upgraded version

Side-Power is now releasing a new and improved version of the radio remote control. The new transmitter is black with an opaque frame around the buttons, and the receiver is designed with a new external antenna.

The new radio remote control will also be available as a dedicated S-link model, eliminating the need for a S-link interface.

### Changes in the new model :

- The remote transmitter now features visual and audible alarms.
- Warning/alert given when the transmitter have no contact with the receiver and when the thruster supply voltage is to low.
- Dedicated version for S-link thrusters (8730 interface no longer required).
- New external antenna solution for better reception and easier remote placement of the antenna (Extension cable available).
- More energy efficient transmitter- uses only one battery, maintains operating time from earlier model with two batteries.
- The new transmitter/receiver is NOT compatible with older models.
- Same price as the previous model.

### Article No.
